WEEKLY ACCOMPLISHMENT REPORT
(Week 1-June-2026)

Name of Intern : Briones, Ritchelene E.
Position : Full-Stack Web Dev Trainee
Office : Kairos Cafe 2nd Floor

Date / Day		Actual Time Log	Actual Accomplishment
June 22, 2026	Monday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I attended my initial job interview and a comprehensive orientation where our team went over our specific roles, tasks, and what is expected of us during the internship. • I started coding tasks on FreeCodeCamp.org to reinforce my understanding of core HTML. • I completed a variety of hands-on exercises including a typing test, learning basic HTML layout architectures, and setting up standard HTML boilerplates. • I successfully built functional structural pages, specifically a Curriculum Outline, a Cat Photo Page, a Recipe Page, and a Bookstore site. • I practiced debugging front-end structural layout issues by finding and fixing coding errors on a Camperbots profile page and a pet adoption page.
June 23, 2026	Tuesday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I studied how the semantic structure of HTML directly impacts Search Engine Optimization (SEO). • I learned about the specific roles of meta descriptions, header tags, and Open Graph tags, focusing on how they affect search engine rankings and how web pages look when shared on social media. • I applied these SEO concepts by coding and building a responsive Travel Agency web page.

Republic of the Philippines
North Eastern Mindanao State University

			• I worked with multimedia components by integrating HTML audio and video elements, coding a working music player and a video player with standard playback controls.
June 24, 2026	Wednesday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I worked with media optimization, exploring best practices for handling images and understanding different types of image licenses. • I learned what Scalable Vector Graphics (SVGs) are, when they should be used over standard images, and practiced by building a custom heart icon from scratch. • I worked with the <code><iframe></code> element, studying "replaced elements" and practicing how to properly embed external videos to build a video display and a clean video compilation page. • I mastered document navigation and URL path syntax, learning the differences between absolute paths and relative paths, as well as how to use slashes, single dots, and double dots. • I reviewed hypertext link states, understanding why they matter for user experience, and successfully completed a basic HTML core review and assessment quiz.
June 25, 2026	Thursday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I explored the structural importance of Semantic HTML, focusing on why maintaining a solid document hierarchy matters for accessibility and how it differs from outdated presentational HTML. • I studied nuanced semantic elements, learning when to use a <code></code> or <code></code> tag over standard stylized text elements, and practiced using description lists to create a clean layout of major web browsers. • I learned how to properly use text and time semantic elements, including block quotes, inline quotes, abbreviations, physical addresses, and standardized dates/times.

Republic of the Philippines
North Eastern Mindanao State University

			• I applied these skills to build a structured informational page called "Quincy's Job Tips".
June 26, 2026	Friday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I reported on-site today for our practical, hands-on technical training session. • I learned how to navigate Git Bash and connect with GitHub, and I successfully practiced updating our project website directly through commands in the bash terminal. • I participated in a technical discussion regarding internet protocols, where we broke down how IP addresses function and compared the technical differences between IPv4 and IPv6 networks.
June 27, 2026	Saturday	MORNING IN: 8:00 AM OUT: 12:05 PM AFTERNOON IN: 12:51 PM OUT: 5:00 PM	• I worked with specialized semantic elements, learning how to correctly represent computer code blocks, mathematical equations, and chemical formulas using native HTML tags. • I studied the unique use-cases for specialized text treatments like the <code><u></code>, <code><s></code>, and <code><ruby></code> elements. • I built two distinct layout projects: a structured Cat Blog page and an Event Hub. • I completed a comprehensive review and a quiz covering Semantic HTML and web accessibility standards. • I wrapped up the week's training by designing a standard-compliant user survey form and learning how to organize data cleanly using HTML tables.

Preview

Step 19

Similarly, users should be able to click on the email address and send an email from their default email client.

Here is how you can make email addresses clickable:

▼ Example Code

```
<a href="mailto:contact@company.c
```

For this final step, wrap the text `fake@email.com` in an anchor element and use `mailto:` to make it a clickable email address.

And with those changes, your blog page is now complete.

```
76 <p>
81 </p>
82 </article>
83 </section>
84 </main>
85 <footer>
86 <section id="contact">
87 <h2>Contact</h2>
88 <address>
89 <p>Phone: <a
90 href="tel:5555555555">555-555-5555</a></p>
91 <p>Email: <a href="mailto:fake@email.
92 com">fake@email.com</a></p>
```

Congratulations. Your code passes.

Debug a Coding Journey Blog Page

Instructionsindex.html

ConsolePreview

Step 9

The last change will be to the email text inside of the footer. In earlier lessons and workshops, you learned how to work with the `mailto:` link like this:

```
<p>Email me at <a href="mailto:janedoe@email.com">Email me at janedoe@email.com</a>.</p>
```

Start by wrapping the `camperbot@log.io` email address inside of an anchor element. Then, add the `href` attribute to the anchor element and set it equal to `mailto:camperbot@log.io`.

With that last change, you have successfully resolved all of the issues in the blog page!

My Journey Learning to Code

I started learning to code a few months ago and it's been a wild ride!

Early Challenges

At first, syntax was really confusing.

Breakthroughs

Eventually things started to click.

Accessibility Matters

Today I learned that not everyone uses the web the same way I do.

Screen Readers

These tools help visually impaired users browse websites.

What's Next?

I'm excited to dive into JavaScript and build interactive features!

Coming soon: My first JavaScript project!

Stay tuned for some exciting interactive blog features.

Build a Tech Conference Schedule Table

Instructionsindex.html

ConsolePreview

Step 14

The last step is to add one more row to the table.

Start by adding another `tr` element. Inside that `tr` element, add a `th` element with a `scope` attribute set to `"row"` and the text content of `2:00 PM`.

Then, add three `td` elements with the following text content:

- Voice UI Workshop
- Git & GitHub Essentials
- Color & Contrast in UI

With those last set of changes, your table is now complete!

```
58<th scope="row">11:00 AM</th>
59<td colspan="3">Break</td>
60</tr>
61
62<tr>
63<th scope="row">11:30 AM</th>
64<td>AR/VR in Education</td>
65<td>JavaScript Fundamentals</td>
66<td>Design Systems at Scale</td>
67</tr>
68
69<tr>
70<th scope="row">12:30 PM</th>
71<td colspan="3">Lunch Break</td>
72</tr>
73
74</tbody>
75</table>
76</body>
77</html>
```

Build an Accessible Audio Controller

Instructions

index.html

Console

Preview

Step 7

Your accessible audio controller is almost complete but there is one last thing to add.

Add a `<button>` element with the `type` attribute set to `button` and with text `Mute` below the `<div>` element.

And with that change, you have completed this workshop!

```
4 <meta charset="UTF-8">
5 <title>Accessible Controls</title>
6 </head>
7 <body>
8
9 <h1>Audio Controls</h1>
10
11 <button type="button">Play</button>
12
13 <div>
14   <span id="volume-label">Volume</span>
15   <span id="volume-description">Adjust the sound level</span>
16   <input type="range" min="0" max="100" value="50"
17     aria-labelledby="volume-label volume-description">
18 </div>
19
20
21
22 </body>
23 </html>
```

Step 89

It would be nice if the vertical space between the `<h2>` elements and their associated icons was smaller. The `<h2>` elements have default top and bottom margin space, so you could change the bottom margin of the `<h2>` elements to say `0` or another number.

There is an easier way, simply add a negative top margin to the `<img>` elements to pull them up from their current positions. Negative values are created using a `-` in front of the value. To complete this workshop, go ahead and use a negative top margin of `-25px` in the `<img>` type selector.

Congratulations! You have completed the Cafe Menu workshop.

```
21 h1, h2, p {
22 }
23
24 .menu {
25   width: 80%;
26   background-color: #burlywood;
27   margin-left: auto;
28   margin-right: auto;
29   padding: 20px;
30   max-width: 500px;
31 }
32
33
34 img {
35   display: block;
36   margin-left: auto;
37   margin-right: auto;
38 }
39
40
41 hr {
42   height: 2px;
43   background-color: #brown;
44   border-color: #brown;
45 }
46
47 .bottom-line {
48   margin-top: 25px;
49 }
50
51 h1, h2 {
52   font-family: Impact, serif;
53 }
```

Build a Stylized To-Do List

Instructionsindex.htmlstyles.cssConsolePreview

Build a Stylized To-Do list

Build an app that is functionally similar to this example project. Try not to copy the example project, give it your own personal style.

In this lab, you will practice the different styles that can be applied to links when they are hovered over, focused, clicked, and visited.

Objective: Fulfill the user stories below and get all the tests to pass to complete the lab.

User Stories:

1. You should have one unordered list with the class `todo-list`.

2. Inside the unordered list, you should have four list items.

3. Inside each list item, there should be:

- An `input` element with the type `checkbox` and `id` set to a unique value.
- A `label` element with the `for` attribute set to the corresponding `input` element's `id`.
- An unordered list with the class `sub-item`.
- A list item with an anchor element in it. The anchor should have the class `sub-item-link`, a valid `href` value, and a `target` value that makes the link open in a new tab.

4. Your `a` elements should not have any text

index.html

```
<div class="container">
  <div class="header">
    <h1>CSS</h1>
  </div>
  <div class="main">
    <ul class="sub-item">
      <li>
        <a class="sub-item-link" href="https://css-tricks.com/" target="_blank">
          CSS Tricks
        </a>
      </li>
    </ul>
    <input type="checkbox" id="task3">Build a Project
    <div class="sub-item">
      <a class="sub-item-link" href="https://www.freecodecamp.org/" target="_blank">
        freeCodeCamp
      </a>
    </div>
  </div>
</div>
```

styles.css

```
.sub-item-link {
  text-decoration: none;
}

.sub-item-link:link {
  color: #0066cc;
}

.sub-item-link:visited {
  color: #7b1fa2;
}

.sub-item-link:hover {
  color: #ff6600;
}

.sub-item-link:focus {
  outline: 3px solid #00b094;
  outline-offset: 2px;
}

.sub-item-link:active {
  color: #e63946;
}
```

My To-Do List

☐ Finish HTML Lab

- MDN Reference

☐ Practice CSS

- CSS Tricks

☐ Build a Project

- freeCodeCamp

☐ Review JavaScript

- JavaScript Info

Responsive Web Design Certification

Design a Blog Post Card

Instructionsindex.htmlstyles.cssConsolePreview

that there is padding inside the card.

8. The `.post-title` and `.post-excerpt` elements should have a text color other than the default and margins on all sides.

9. The `.read-more` element should be styled like a button and have:

- A text color other than the default.
- A background color.
- Margins on all sides.
- Padding on all sides.
- Rounded corners.
- A `display` property set to `inline-block`.
- A hover effect that changes its background color.

Note: Be sure to link your stylesheet in your HTML and apply your CSS.

Tests:

1. You should have a `div` with a class of `blog-post-card`.

2. You should have an `img` element with a `class` of `post-img`. Make sure your image has an `alt` attribute with text and a `src` attribute with a value.

3. You should have a `div` with class of `post-content`.

4. You should have an `h2` element with a class of

index.html

```
<img alt="A scenic landscape with mountains and a lake" data-bbox="120 440 300 480" class="post-img" />
<div class="post-content">
  <h2 class="post-title">Discover the Beauty of Nature</h2>
  <p class="post-excerpt">Explore breathtaking landscapes, peaceful forests, and stunning mountain views while learning how spending time outdoors can improve your well-being.</p>
  <a class="read-more" href="#">Read More</a>
</div>
</body>
</html>
```

styles.css

```
.post-title {
  color: #2c3e50;
  margin: 15px;
}

.post-excerpt {
  color: #555;
  margin: 15px;
  line-height: 1.6;
}

.read-more {
  display: inline-block;
  text-decoration: none;
  color: white;
  background-color: #4caf50;
  padding: 10px 20px;
  margin: 15px;
  border-radius: 8px;
  transition: background-color 0.3s ease;
}

.read-more:hover {
  background-color: #388e3c;
}
```

Discover the Beauty of Nature

Explore breathtaking landscapes, peaceful forests, and stunning mountain views while learning how spending time outdoors can improve your well-being.

Build an Event Flyer Page

Build an app that is functionally similar to this example project. Try not to copy the example project, give it your own personal style.

Objective: Fulfill the user stories below and get all the tests to pass to complete the lab.

User Stories:

- You should have a `<header>` element within the body.
- Your `<header>` element should have an image in it for your event, and an `<h1>` in it with your event title, in that order. You can use this image if you would like: <https://cdn.freecodecamp.org/curriculum/lab/event-image.jpg>
- You should have a `<main>` element within the body.
- Your `<main>` element should have at least two `<section>` elements within it showcasing the event features.
- Your `<section>` elements each should have an `<h2>` within them.
- Your body should have a top and bottom padding of `[50px]`.
- Your body should have a top and bottom margin of `[0]`, and a left and right margin that centers itself.
- Your body should have a width set relative to the width of the viewport.
- Your body should use the `calc()` function to set its `min-height` property to 100% of the viewport's height.

```

index.html
